YOONBO CHO

AI Engineer · Applied LLM Systems

Elkins Park, PA · +1 718 541 6008 · yoonbocho1@gmail.com · yoonbo1.github.io · github.com/yoonbo1 · linkedin.com/in/yoonbo-cho-9780301b9 · Open to relocation

WORK EXPERIENCE

Senior Developer — A View From My Seat — Nov 2024 – Aug 2026 · Philadelphia, PA

*Sports/venue platform · **1.2M monthly active users***

- Owned native iOS (Swift) and Android (Kotlin) development end-to-end: spec, architecture, implementation, QA, and release, shipping **80+ updates** at feature parity across platforms.
- Shipped **vision-based moderation** for user-submitted seat-view photos, auto-flagging or clearing each image for publication, and backfilled structured metadata like view obstructions across the photo corpus.
- Built a **venue-scouting agent** that runs daily, diffs live venue data against stored snapshots, and alerts only on real changes, replacing manual monitoring.
- Automated the **seating-chart ingestion pipeline** that publishes charts to client websites, replacing a manual upload-and-publish process; a teammate reported it saved a full day of work per chart.
- Rebuilt the **maps experience** from broken to production-grade and cut its server costs with caching; reworked every seating chart as optimized SVG, shrinking files and making charts styleable with CSS.

Founder & AI Engineer — Yoonibo LLC — Jul 2022 – Present

Everblue — passive AI journaling iOS app · everblue.me · live on the App Store, launched Jun 2026

- Built an **LLM eval harness** that runs the real production pipeline on synthetic day-payloads and grades against the production rubric (voice lint, specificity, hallucination). Ship bars of 92%+ generation quality and a 100% no-fabrication gate block every prompt change.
- Engineered an **on-device hybrid-retrieval RAG pipeline**: MiniLM ONNX embeddings, BM25, exponential recency decay, and MMR re-ranking, grounding an AI companion in months of personal context. Deliberately no vector database: the per-user corpus doesn't warrant one.
- Built a **multi-provider LLM backend** (Django) routing Gemini and Claude by feature and subscription tier, with retry-and-fallback orchestration, cache-stable prompt prefixes, thinking-token caps, per-request billing instrumentation, and PII redaction on every request.
- Shipped fully on-device photo captioning (~500MB FP16 **Florence-2** Core ML, custom Expo config plugin, Swift bridge) and debugged its jetsam crashes on 4GB iPhones; then reversed the design when the ~1.1GB bundle stopped earning its cost, replacing it with a gated backend service.

tickatap — Yoonibo LLC — 2026

*Taste-driven going-out platform · **tickatap.com** · live*

- Built **Tap**, a booking agent, on a hard safety invariant: purchase execution required an active mandate enforced server-side in the tool executor, never the prompt, verified by a 25-case adversarial suite at 100%. Retired it at 13.3% task success against a 90% bar, and kept the invariants.
- Built the platform solo as a **10-workspace TypeScript monorepo** (Fastify, Next 15, Expo, Postgres); wrapped every commerce integration behind a provider interface with a deterministic mock, so the full checkout path including payments runs and tests offline.

Software Developer — Fabspeed Motorsport — Jan 2022 – Jul 2022 · Philadelphia, PA

- Raised site conversion through **heatmap-driven UX optimization**.
- Launched **wholesale.fabspeed.com**, taking the site from under-construction to production-ready, and built reusable React tools for bulk product updates.
- Built **Python scrapers** extracting Google and Yelp customer reviews at scale.
